Smaller Class Sizes Reporting Template

Notes:

Average Class Size: For each grade level, include both regular and blended classes in calculating the average class size. Blended classes should be calculated in the average for their lowest grade. For example, for Grade 1, if you have 1 regular class and 1 blended class (mix of Grade 1 and Grade 2 students), include both as Grade 1 classes while calculating the average. Do not include the Grade 2 students in that blended class again while calculating the average class size for Grade 2 (no double counting).
